

Fays WMS

Warehouse Barcode Automation

Compatible with All Businesses,
Next Generation Warehouse Automation Software Solutions

Why Fays?

Anlaş Otomasyon add value to your processes with corporate business solutions.

Fays WMS Warehouse Management System uses barcode and RFID technologies to control your warehouse. It optimizes your warehouse processes and ensures traceability. It integrates product monitoring systems and warehouse process at pre-storage production stage with "Product Labelling Module" and "Packaging Module".

With "Shipment Planning Module" and "Rack Location Tracking Module", regardless of how complex your warehouse is, it allows you to easily find the product based on important criteria such as FIFO, LOT and Expiry Date.

Fays is an easy to use program that gives you a sense of safety thanks to its technological infrastructure.

Wide Selection of Modules

It provides wide options such as product acceptance-placement, supply-feeding, shipment, material picking, stock management and production.

High Technology and Innovation

It provides convenience with its voice product picking module and it allows you to track every detail in your warehouse processes with its unique (smart) barcode.

WEB, ERP, WMS Integration

Through “Integration Module”, the system works in integration with your commercial software.

Compatible with Handheld Terminals

Product acceptance, shipment, serial/lot, production, foreign trade, palette/parcel and kitting operations are handled practically.

Company's need

Warehouse Management System? or Stock Tracking System?

Stock Tracking System

Stock Tracking System includes capabilities such as Cycle Counting, Warehouse Transfer, Production and Order Controlled or Uncontrolled Warehouse Input-Output Movements, Serial-Lot, Expiry Date, FIFO and Location Tracking.

Warehouse Management System

Warehouse Management System has all features of the Stock Tracking System.

Additionally:

It includes Layout Plan, Dynamic Rack Location Tracking, Rack Capacity Tracking, Rack Transfers, Handling, Picking, Loading, Unloading, Packaging, Labelling, Optimization, Shipment Planning, Route, Final Inspection, Quality Tracking, Warehouse Personnel Tracking, Vehicle Info, Packing List (Liability Report), Warranty Tracking, Weighbridge Module, Barcode Label Design, Consumable & Waste Materials and Inputs from Production.

Easily manage the stock input-output movements of the goods located in your warehouse.
